

Dual-Tape™ Hand Tape

It's not often that a basic product can be greatly improved upon, but the Dual-Tape™ is one such exception. As the product name implies the tape reads in two directions: Left-to-Right (standard) and Right-to-Left. This permits direct face-up reading of the tape no matter which side you use it, thus eliminating mis-reads and twisted necks! Accuracy is held to $\pm .03$ for 16' of measured tape.

As shown, graphics are easy to read with continuous reading inches in both directions plus a common scale for feet-and-inches. The feet-and-inch scale actually triples the effective use of the Dual-Tape by being able to directly read the tape in a vertical or perpendicular application. The first foot is graduated to 1/32" and Diamond Marks reference 16" stud centering. The yellow blade measures .006 thick and 3/4" wide x 16 feet long, and comes in a charcoal gray plastic case with a belt clip, durable tape lock, auto-retract and a reinforced blade tip.

Open Frame Hand Tapes

Shown: Linear Tape in 3" case.

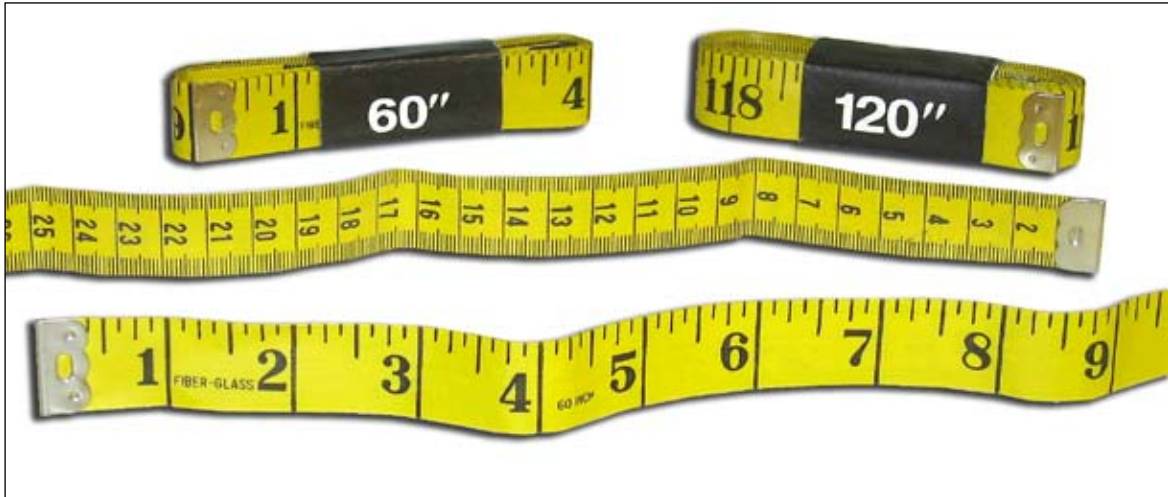

This unique design of flat flexible measuring tapes comes in two basic styles: Direct reading Diameter Tapes (DT) for measuring round objects; Direct reading Linear Tapes (LT) originally designed for agricultural husbandry. Tapes are made of a vinyl impregnated polyester woven fiber 1.10 inches wide with easy to read graphics in both Fractional and Metric. The case is made of fiberglass reinforced plastic with stainless steel fasteners that provides rugged outdoor use. Optional selections include: Tape complete in case (HT); Replacement Tape (RT) preattached to a spool; or as a Separate Tape (ST) as an economical alternative to the case style (no triangle loop at end).
